

# Aim 2: Perceptual adjustment queries and perceptual metric learning

NeurIPS 2023

# Perceptual Adjustment Queries (PAQs)

Adjust slider until the fruit is dissimilar to the reference

Reference item

The interface displays a sequence of fruit images illustrating a perceptual adjustment. The sequence starts with a red apple on the left and transitions through various shades of red, orange, and yellow to a green pear on the right. A slider bar is positioned below the images, with a central knob that can be moved to adjust the perceived dissimilarity from the reference item.
